The University of Texas at El Paso (UTEP) — El Paso, Texas
Bachelor of Science in Computer Science — Graduation date: May 2024

El Paso Community College (EPCC) — El Paso, Texas
Associate of Arts in Multidisciplinary Arts — Graduation date: December 2020

Skillsets

- Languages: TypeScript, JavaScript, Python, Java, GraphQL
- Frontend: React, Next.js, HTML, CSS/LESS, Apollo Client
- Tools & DevOps: Git, GitHub, VS Code, Jira, GitHub Actions, Jest, ESLint/Prettier
- Additional: Bilingual (English/Spanish), Team Management

Work Experience

Best Buy — Richfield, Minnesota
Engineer I — September 2026 – Current
Associate Software Engineer — August 2024 - September 2026

- Built and maintained a cross-platform AdTech component library (TypeScript, React) supporting Google Ads, AdSense, and sponsored placements, integrated with internal mediation and data services; implemented GraphQL (Apollo) queries for ad/product data and analytics tracking.
- Ensured reliability and delivery through 90%+ test coverage (Jest, React Testing Library), contract testing, and ownership of 10+ CI/CD workflows (GitHub Actions) supporting deployments.

Best Buy — Richfield, Minnesota
Software Engineer Intern — June 2024 - August 2024

- Enhanced keyboard navigation and accessibility in carousel ad sections, improving A11Y compliance and user experience.
- Added meta tags across pages to maintain Google Ad services integration.
- Improved display-ad rendering with visual distinction styling fixes.

Best Buy — El Paso, Texas
Advanced Repair Agent (ARA) — October 2022 – June 2024

- Resolved complex hardware and software issues to improve customer satisfaction; Apple and Samsung certified technician performing diagnostics and pre/post-repair documentation.

Premier Wireless — El Paso, Texas
Technician/General Manager — March 2018 – October 2022

- Managed team operations for four years, leading the team to maximize sales performance.
- Diagnosed and resolved software and hardware issues for mobile devices.

Cell Phone Fix — El Paso, Texas
Technician — September 2016 - March 2018

- Led team operations for four years to drive sales performance while diagnosing and resolving mobile hardware and software issues.

Projects

Natural Language Processing (NLP) – Python

- Implemented an AVL self-balancing binary search tree to compute word-embedding similarities, identifying semantically related words represented as high-dimensional vectors.

Gym Website Project

- Built a full-stack fitness application with workout tracking, goal setting, and meal planning features.
- Integrated third-party APIs for meal recipes and a ChatGPT extension for fitness inquiries; implemented user authentication and a Firebase database for persistent user data.
